SUMMARY

Results-driven Computer Science graduate with a passion for deriving insights from data. Proficient in data manipulation, analysis, and visualization. A detail-oriented and effective communicator known for collaborative teamwork and meeting deadlines. Seeking opportunities to apply expertise in engaging and collaborative projects.

PROJECTS

Comprehensive Sales Analysis with SQL and Power BI

🔗 https://medium.com/@himanshu_rawat2003/decoding-business-performance-a-comprehensive-sales-analysis-with-sql-and-power-bi-3dd4f49ca721

- Led end-to-end data analysis project, transforming static sales reports into dynamic visual dashboards using Microsoft SQL Server Management Studio and Power BI.
- Extracted, cleaned, and integrated relevant data from AdventureWorksDW database (2022 version) and Excel budget files (2022) to create a comprehensive data model.
- Implemented optimized SQL queries for data preparation, including complex joins and aliasing techniques for inclusive representation and null value handling.
- Developed interactive Power BI reports with customizable filters, empowering Sales Managers and Representatives to track product sales, client performance, and trends efficiently.

Analyzing Data Science Job Salaries: A SQL and Power BI Exploration

🔗 https://medium.com/@himanshu_rawat2003/analyzing-data-science-job-salaries-a-sql-and-power-bi-exploration-04ce932b6c40

- Led an independent data analysis project focusing on data science job trends and compensation using SQL Server and Power BI, extracting insights from a database of 8114 records since 2020.
- Proficiently cleaned and structured the dataset, performing SQL queries to handle salary columns, streamline data, and reclassify remote work options for effective analysis.
- Conducted in-depth SQL analysis to answer key questions such as job title diversity, top salaries, average pays per country, entry-level salary variations, remote job prevalence, and annual salary changes.
- Generated a comprehensive Power BI report featuring card visuals, donut charts, bar graphs, and dynamic filters, visualizing total job counts, salary averages by experience level, employment type, mobility trends, and popular job categories.
